

Video Surveillance with AI Supervision

Trigger: Motion in Secure Zone B

Action Complete: Alarm + Lights + Alert

Event Chain Executed: 3 Actions Logged

From Recording to Supervising - The Business Transformation

Traditional cameras record events for after-the-fact review. AI Orchestrator™ creates intelligent video supervision that prevents, alerts, analyzes, and optimizes in real-time. This isn't just better security - it's **operational intelligence** that transforms how your business operates.

CONSTRUCTION

- "Are workers wearing hard hats, safety vests, etc?"
- "Are any individuals entering restricted areas?"
- "Is heavy machinery (i.e. cranes, excavator) operated safely & correctly?"

Enhanced Security

Proactive threat detection with automated response

Operational Excellence

Monitor workflow efficiency, safety, compliance, and productivity insights

Business Intelligence

Analytics on customers' behavior, facility utilization, and process optimization

Compliance Documentation

Automated logging and reporting for regulatory requirements

Remote Management

Full business visibility from anywhere

Now is the ideal moment to upgrade first-generation cameras, reusing your existing wiring and infrastructure to unlock modern AI supervision. The result is greater visibility, deeper insight, and proactive control that helps your business operate smarter, safer, and with confidence.

Proactive Prevention and Increased Accountability

Empower your team by going beyond live and recorded video, providing advanced loss prevention tools.

Increase accountability and compliance by assigning user-specific video access, AI alerts, and logs, and by sharing footage instantly. Leverage powerful analytics and business intelligence tailored to each role. Our cloud-based, plug-and-play platform eliminates on-premise servers, and simplifies installation, reducing upfront costs, and lowering long-term management overhead.

AI is made easy with AI Orchestrator™, which lets you create custom AI Agents or deploy curated industry-specific agents. These AI tools monitor your cameras, automate alerts, and turn video into intelligent oversight and actionable insights that improve decision-making and operational efficiency.

What your Managers Really Need

How IPTECHVIEW AI Gets These Jobs Done

Plug-and-Play™ Cameras

Automatically pre-configured cameras shipped to where you need them and installed by a partner of your choice. Cameras go live shortly after plugging in. Authorized users can log in with their company email account & password immediately.

AI Orchestrator™

Turns video into insights, automated alerts, and intelligent oversight. Instant alerts and automated control actions on events when critical situations are detected.

Simple, Serverless, Scalable & Secure

Browser-based, no servers. Instant access to live and recorded video, loss prevention tools, fast sharing, and logging of events of interest. Personalized access with enterprise-level security & privilege management.

Live Control, Audio, and Real-Time Awareness - Anywhere

IPTECHVIEW Cloud VMS is not just for reviewing video after the fact. It delivers real-time visibility, interaction, and control from anywhere

Live Viewing from Anywhere

View cameras live on desktop or mobile with low-latency streaming and instant access across locations.

Two-Way Audio

Listen in or speak through supported cameras and speakers for real-time communication, deterrence, and assistance.

PTZ Control

Remotely pan, tilt, and zoom cameras to follow activity, investigate incidents, or adjust views in real time—directly from the cloud or mobile app.

Gate, Door, and Device Control

Trigger gates, doors, lights, sirens, or relays directly from live video or AI events to enable immediate response—not just notification.

Mobile Live View & Audio

Watch live video, access recordings, listen to audio, and take action from your phone—no VPN, no on-prem systems required.

Alerts That Matter

AI-driven alerts are filtered, prioritized, and contextual—so teams are notified only when action is required, not flooded with noise.

See Everything Live, Instantly

One platform, one login, all locations—live video, audio, AI events, and controls accessible anytime, anywhere.

Cloud Storage & Video Retention

Cloud Storage That Works the Way Business Actually Operates

IPTECHVIEW Cloud Storage transforms video from isolated recordings into a secure, searchable, always available operational record. Built natively into the platform, cloud storage eliminates the need for on-premise NVRs while enabling smarter investigations, compliance, and AI-driven supervision. Video is stored securely in the cloud, accessible instantly from anywhere

Flexible Storage Models - You Choose What Matters

IPTECHVIEW supports **multiple storage approaches** to match operational, regulatory, and budget requirements:

Cloud Recording

Event-based video stored securely in the cloud, triggered by motion and AI detections. Optimized to reduce bandwidth and storage costs while preserving critical footage.

Edge + Cloud Hybrid

Cameras record continuously to on-camera SD storage while critical events, AI detections, and alarms are uploaded to the cloud for centralized review and alerts.

Local-Only (Edge) with Cloud Access

Footage remains on the camera or SD card while cloud services provide centralized playback access, device health monitoring, and AI supervision.

Designed for AI, Search, and Accountability

Cloud storage in IPTECHVIEW is not passive—it is **AI-aware**.

- AI events are automatically linked to recorded footage
- Supervisory AI logs include direct video references
- Attribute search lets users find moments by what happened, not just when
- Managers can review incidents without scrubbing hours of video

This turns video storage into a decision-making and accountability tool, not just an archive.

Playback & AI Capabilities

Continuous Recording (Edge)

Continuous recording enables seamless, uninterrupted playback directly from the camera's edge storage, delivering fast access without dependence on cloud video retention.

Edge Player

Edge Player provides near-instant playback of events seconds after they are recorded to the camera's SD card, with continued access to footage beyond cloud retention as long as recordings remain available on the edge.

In-Cloud AI

In-Cloud AI gives users instant access to curated and custom AI models, enabling filtering, review of detections, and deeper operational insights from cloud-processed video.

Smart Review & Investigation Tools

Event Thumbnails

Visual previews displayed along the timeline allow users to quickly scan events and jump directly to playback for faster review and investigation.

In-Camera AI Timeline Markers

Colored timeline markers appear within recorded video, allowing users to hover and preview detected people, vehicles, bicycles, and faces directly from the timeline.

Multicam Timeline View

Multicam enables synchronized review of recordings and events from multiple cameras on a single timeline, making it easy to identify where an incident started and track activity across an entire location.

Built for Compliance, Investigations, and Scale

- Configurable retention policies per camera or site
- Secure access controls and audit logs
- Fast exports for investigations, HR, legal, or insurance
- Scales globally without redesign or added hardware

Whether you need 7 days, 30 days, 90 days, or longer retention, IPTECHVIEW adapts without changing infrastructure.

No NVRs. No Servers. No Maintenance

Traditional systems rely on local recorders that introduce risk, cost, and operational overhead.

IPTECHVIEW's **Just Cameras & Cloud™** model removes:

- Server failures
- Disk replacements
- Firmware drift
- Site-by-site maintenance

Everything is updated, monitored, and secured centrally - automatically.

Video AI Primetime Is Now

IPTECHVIEW gives you both the Classic AI and Next Generation AI.

The Classic AI Analytics

Classic AI capabilities like license plate recognition (LPR) and facial recognition are core building blocks within IPTECHVIEW, delivering proven, real-world value from day one. These technologies help organizations identify vehicles and people of interest, streamline access, and improve investigations without adding complexity. Fully integrated into the IPTECHVIEW platform, they're easy to deploy, centrally managed, and scalable across single sites or global environments.

License Plate Recognition (LPR)

Face Recognition

Next Generation AI Is Here - Ready For You To Benefit From

Don't miss the beginnings. This is the time when the technology starts, and offers great value, and most innovators and well-informed business people join. In the beginning, things are still affordable, and the technology is easy to catch up on.

So how does this new AI work? In order to understand the world, all Large Language Models needed to learn how to understand the world and spent billions. IPTECHVIEW has tapped into this by becoming technology partners and using the best Visual Language Models from OpenAI, Google, and Antropic. We mix & match to optimize depending \on each one's strengths. We also constantly add and replace AI models to offer the best intelligence we can find.

To make all this possible, we developed a suite of AI-enabling tools - all based on our company DNA of simplifying technology, making it robust and reliable so it becomes valuable for everyday use by managers and staff to increase security, become preventive, and support accountability.

Next Generation AI - Ready For You To Benefit From Now

AI Orchestrator™ is where intelligence becomes automation. It gives you full control over how your system thinks and reacts—without writing a single line of code. Define smart workflows that connect camera-based detection with real-world actions across video, alarms, access, and environmental devices. No dev team required—just drag, drop, and deploy.

AI Library contains released curated AI solutions (Curated AIs) and custom AIs you have created in AI Studio™. Already comes with over 30 curated AIs and more are coming soon.

AI Studio™ is where you create AI prompts. These prompts can be tied to specific Large Language Models (LLMs). We provide access to leading, secure foundational models (AWS, Google, OpenAI, etc.), from lightweight to top-tier, allowing you to balance capability and cost.

AI Controller acts as the “traffic tower” of the system, where AIs become active “mini agents” once combined with rules and schedules.

Curated AIs are pre-selected, purpose-built AI models that are chosen, tested, and optimized for specific real-world use cases—rather than generic or experimental AI. In IPTECHVIEW, curated AIs are ready to deploy out of the box, delivering consistent results with minimal setup and fewer false alerts. They let teams quickly apply the right intelligence to the right situation while scaling reliably across sites and environments.

We Make It Easy to Get Started with AI

Define your project goals and the AI capabilities you require

Explore the AI Library for curated solutions that may already meet your needs

If no suitable solution exists, gather requirements and create your own using AI Studio™

Alternatively, work with your technology partner or engage IPTECHVIEW Professional Services to develop a specialized solution tailored to your environment

Simplification & Democratization

IPTECHVIEW brings video intelligence beyond traditional security teams, giving managers, operations staff, and even remote workers, the visual awareness they need to make better decisions.

Trusted by tens of thousands of cameras across more than 20 countries since 2019, IPTECHVIEW now introduces AI Orchestrator™ to deliver a new level of complete business supervision.

Built with security by design and native support for leading camera brands, including AI-enabled smart cameras, the platform scales with your business—not your infrastructure.

Scalable and Fast to Install and Use

IPTECHVIEW AI is built to make system design and deployment easy and minimize installation and training costs. Our system works without local servers or storage units, which reduces complexity. Just Cameras and Cloud™ summarizes our principle.

Projects can start as small as a single camera at a location and grow to hundreds of cameras per building and a nationwide system with thousands of cameras.

Future-proof Platform

IPTECHVIEW was created to view more than cameras. It can access many other IP devices, video door stations, like access control, communications, paging, or environmental sensors from different vendors, minimizing vendor lock-in and providing access to the best in each field to future-proof your solution.

We selected and certified top brands of cameras, different access control and IoT vendors, routers, and PoE switches to create a more logical ecosystem. You and your team only need to learn one way of doing things on the platform, regardless of the brand of device or application.

The platform also continues to grow and get updates and even new functionality. Updates are included in the subscription at no extra cost and become available over the cloud, along with firmware updates for UNIVERSAL and certified camera brands when supported.

and humidity

Central Remote Management & Device Health Monitoring

IPTECHVIEW makes it easy to manage cameras and connected devices across one or many locations from a single, centralized interface. System health, connectivity, and performance are continuously monitored, with proactive alerts that help prevent downtime before it impacts operations.

Remote configuration, updates, and diagnostics reduce the need for on-site service visits, keeping systems secure, reliable, and always up to date—while lowering operational costs for end users and reducing service overhead for partners.

In today's world of AI and smart edge devices that must adapt to changing operational needs over time, a secure and centralized remote management platform is essential.

Central Monitoring (IMMIX), and Remote Monitoring

IPTECHVIEW integrates with professional central monitoring platforms such as IMMIX, enabling real-time monitoring, visual verification, and intelligent response from anywhere. Security teams and monitoring centers gain immediate context through live video and AI-driven alerts, improving response times and decision-making.

Whether used for in-house security operations or outsourced monitoring services, IPTECHVIEW delivers scalable and reliable remote monitoring—combining traditional alarm handling with intelligent video supervision for stronger protection and situational awareness.

Centralized control and seamless integration management ensure that monitoring teams and service providers can be connected quickly and deliver consistent, high-quality live monitoring without added complexity.

The Hardware Ecosystem That Powers A Smarter Security Platform

IPTECHVIEW offers a curated ecosystem of enterprise-ready hardware — intelligent cameras, door stations, routers, gateways, environmental sensors, and more. IPTECHVIEW-Ready™ devices are plug-and-play, cloud-connected, and fully compatible with our AI-powered platform. From single-site deployments to global rollouts, you get flexibility, speed, and control—without vendor lock-in or technical friction.

No single hardware manufacturer is the best for all situations. At IPTECHVIEW we selected several leading camera manufacturer and also other vendors to expand the functionality of the systems. We even added infrastructure partners for PoE switches, routers, and wireless access so the entire solution can be safely managed and configured remotely.

Intelligent Cameras - Capture More with AI-Ready Cameras

IPTECHVIEW's intelligent cameras do more than record—they analyze, detect, and help you act in real time. Designed for both performance and ease, these cameras feature built-in edge AI, exceptional image quality, and seamless cloud integration. Indoors or outdoors, you'll capture critical moments with clarity, context, and control.

Door Stations - Smart Entry Devices for Secure, Remote Access

IPTECHVIEW's door stations bring together video, audio, and access control in one sleek, connected device. Whether you're managing an office, multi-tenant building, or remote facility, you can verify visitors, communicate in real time, and grant or deny access—from anywhere. They're more than an intercom—they're your first line of smart security.

Security Gateway - Protect Your Network Without Adding Overhead

The IPTECHVIEW Security Gateway combines connectivity for non-certified cameras with cyber protection. It is a purpose-built solution that isolates "less safe" cameras through a two-way firewall, provides secure remote access, all in one plug-and-play device. Whether you're deploying across one site or one hundred, this gateway simplifies secure connectivity while reducing IT complexity. Fully supported cameras are HikVision and some other ONVIF cameras. Call to check if your cameras are supported.

Environmental & IoT Monitoring Sensors - Know the Conditions That Matter Before They Become Problems

Environmental threats can be just as damaging as intrusions. Whether it's temperature swings in cold storage or unexpected motion in a sensitive lab, IPTECHVIEW's environmental and IoT sensors help you detect and respond to risk before it leads to loss. Integrated directly into your security dashboard, these devices deliver real-time data with real-world impact.

Why IPTECHVIEW - The Only Full Stack Platform Designed For Freedom And Future

IPTECHVIEW was built with one goal in mind: to make advanced security accessible, scalable, and easy to manage, requiring a minimum of local hardware, reduced IT cost, and no single vendor lock-in. Our cloud-native platform combines visual intelligence, access control, alarms, and infrastructure monitoring into one powerful, intuitive dashboard. Use your cameras, your infrastructure, and manage it all through our secure, open cloud. No on-site servers. No unnecessary overhead. Just smarter tools for modern businesses and multi-site operators.

The IPTECHVIEW Stack

Serverless - Our Just Cameras & Cloud™ approach removes the need for local servers, eliminating single points of failure while simplifying design, speeding deployment, and reducing long-term costs.

Secure - Many people assume on-premise video systems are more secure, but in reality, they're often more vulnerable than cloud platforms architected for security and backed by dedicated security personnel. Access is further protected with features like two-factor authentication and enterprise-grade privilege management.

Scalable - Whether it's one camera at a remote site, a small office, or hundreds of cameras across locations worldwide, IPTECHVIEW scales with you. Start with surveillance and add analytics, access control, or IoT when you're ready—no redesign required.

How To Get IPTECHVIEW AI - Surveillance, Supervision, And Business Intelligence

1

Choose How You Want To Start

Begin with a new Just Cameras and Cloud™ setup using one camera at one location, or upgrade existing NDAA-compliant cameras by adding an IPTECHVIEW subscription.

2

Connect Your Cameras

Install new cameras or run a simple provisioning tool on your network to securely connect existing cameras to IPTECHVIEW in just minutes. With pre-configured IPTECHVIEW-Ready™ cameras, installation other than wiring, becomes Plug-and-View.

3

Add Video AI

Adding IPTECHVIEW Video AI turns video into an active tool. It improves security, helps prevent issues before they happen, and creates clear accountability across people and operations — value users notice quickly and resellers can confidently stand behind.

4

Simple Subscription Model

Complete a one-time setup and activate IPTECHVIEW Surveillance (SRV) with a flat per-camera subscription, no servers or NVRs required.

Subscriptions are simple, predictable, and scalable, with clear options based on the functionality you need. This model eliminates upfront infrastructure costs, simplifies budgeting, and allows your system to grow or adapt over time.

Choose basic camera licenses with or without cloud AI, local or cloud storage, and add advanced capabilities such as Face Recognition or curated AI solutions on a per-camera basis. You pay only for what you use, with flexible monthly or discounted annual subscriptions, and the ability to trial specialty cloud features at no cost.

5

Set Up Users

Your surveillance partner or IT team provisions cameras and sends secure login access to users via SMS or email.

6

Access From Anywhere

Once authenticated, users with the right privileges can securely view live and recorded video as well as access AI Alerts and Supervisory AI logs from any location, at any time.

Smarter Security.
Faster Response.
Lower Risk.
